Open <https://portal.azure.com> on your Desktop/Laptop

Please Sign in with "Emp.ID@conneqtcorp.com"

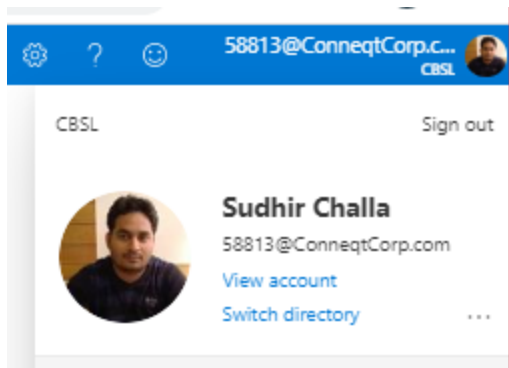

You will be redirected. Please enter your System/Domain password

Please enter

Left Click on your ID and select View account

Verify your login using your mobile number or any other verification option you selected.

A screenshot of a web browser showing the 'Additional security verification' page. The browser's address bar shows the URL 'account.activedirectory.windowsazure.com/Proofup.aspx?BrandContextID=O365&ruO365=https%3a%2f%2fportal.o...'. The page title is 'Additional security verification'. Below the title, there is a paragraph explaining that users are required to respond from a registered device. A dropdown menu is set to 'Notify me through app'. Under 'how would you like to respond?', there are three options: 'Authentication phone' (checked), 'Office phone' (unchecked), and 'Alternate authentication phone' (unchecked). The 'Authentication phone' section shows a country/region dropdown set to 'India (+91)' and a phone number '9246345636'. The 'Office phone' section shows a country/region dropdown set to 'Select your country or region' and a phone number '040 66951128'. The 'Alternate authentication phone' section shows a country/region dropdown set to 'Select your country or region' and an empty phone number field. At the bottom, there is a 'Set up Authenticator app' button and a list of existing authenticator apps, including 'Authenticator app - SM-M305F' with a 'Delete' button.

You can select any one of the 5 options available in the below dropdown list.

Additional security verification

When you sign in with your password, you are also required to respond from a registered device. This makes it harder for a hacker to sign in with just a stolen password.

We'll use this verification option by default.

Notify me through app
 Call my authentication phone
 Text code to my authentication phone
 Call my office phone
 Notify me through app
 Use verification code from app or token

1. Call my authentication phone – A call with One Time Password (OTP) will be received
2. Text code to my authentication phone – An SMS/Text message will be sent to your mobile phone
3. Call my office phone – A call will be received on given number and OTP will be read
4. Notify me through app – Authenticator app will give a notification on the device it is installed to approve login. **This is the best option.**

Use verification code from app or token – On Authenticator App, a 6 digit code will be displayed and it changes every 30 seconds. Code has to be entered and authenticate before it expires.

After all the details are entered, Click on Set up Authenticator app.

Notify me through app

how would you like to verify?

Set up one or more of the following options:

☒ Authentication phone
☐ Office phone
☐ Alternate authentication phone
☒ Authenticator app or Token

Authenticator app - SM-M305F

Configure mobile app

Complete the following steps to configure your mobile app.

1. Install the Microsoft authenticator app for Windows Phone, Android or iOS.
2. In the app, add an account and choose "Work or school account".
3. Scan the image below.

[Configure app without notifications](#)

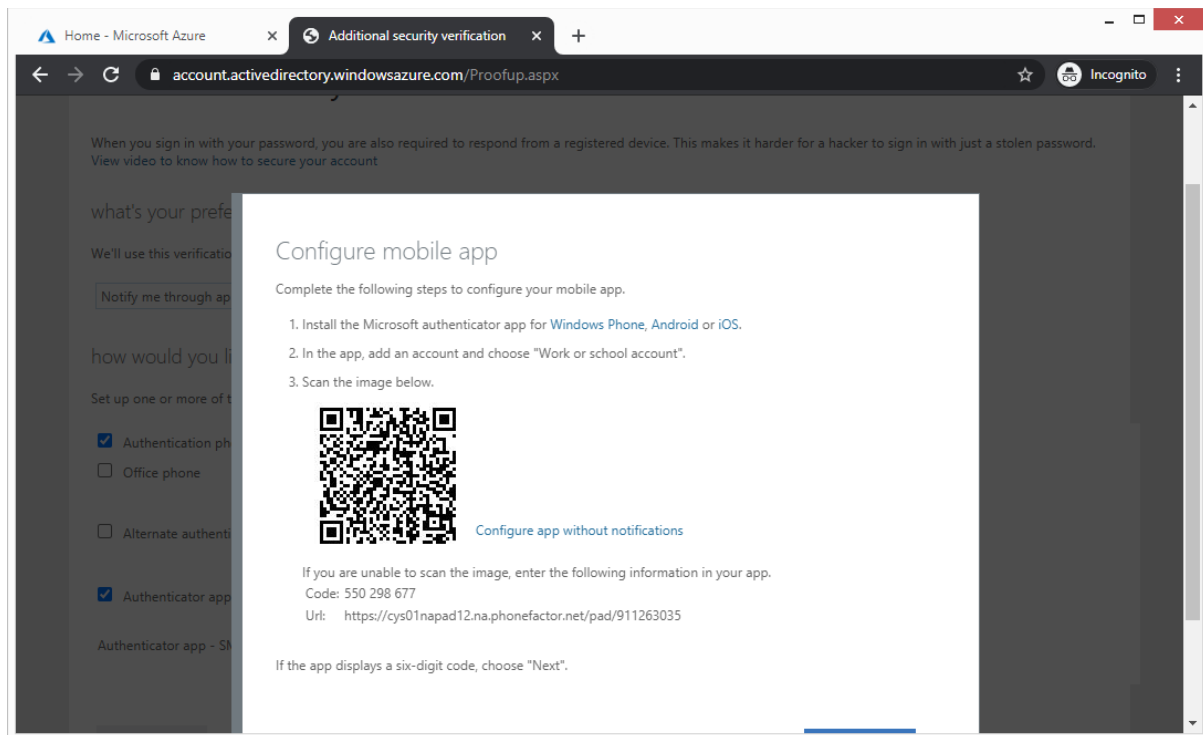

If you are unable to scan the image, enter the following information in your app.
Code: 550 298 677
Url: <https://cys01napad12.na.phonefactor.net/pad/911263035>

If the app displays a six-digit code, choose "Next".

Select Work or school account

Select Allow, when prompted "Allow Authenticator to take pictures and record video?"

Scan the QR Code on monitor

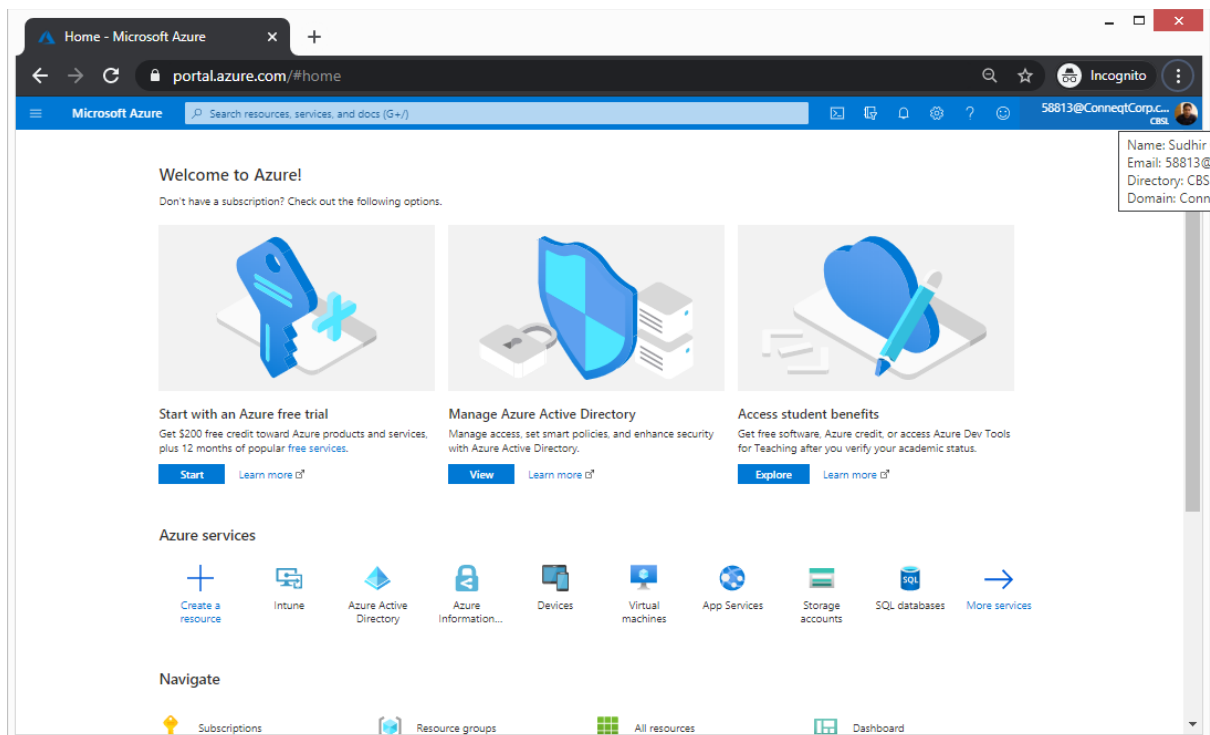

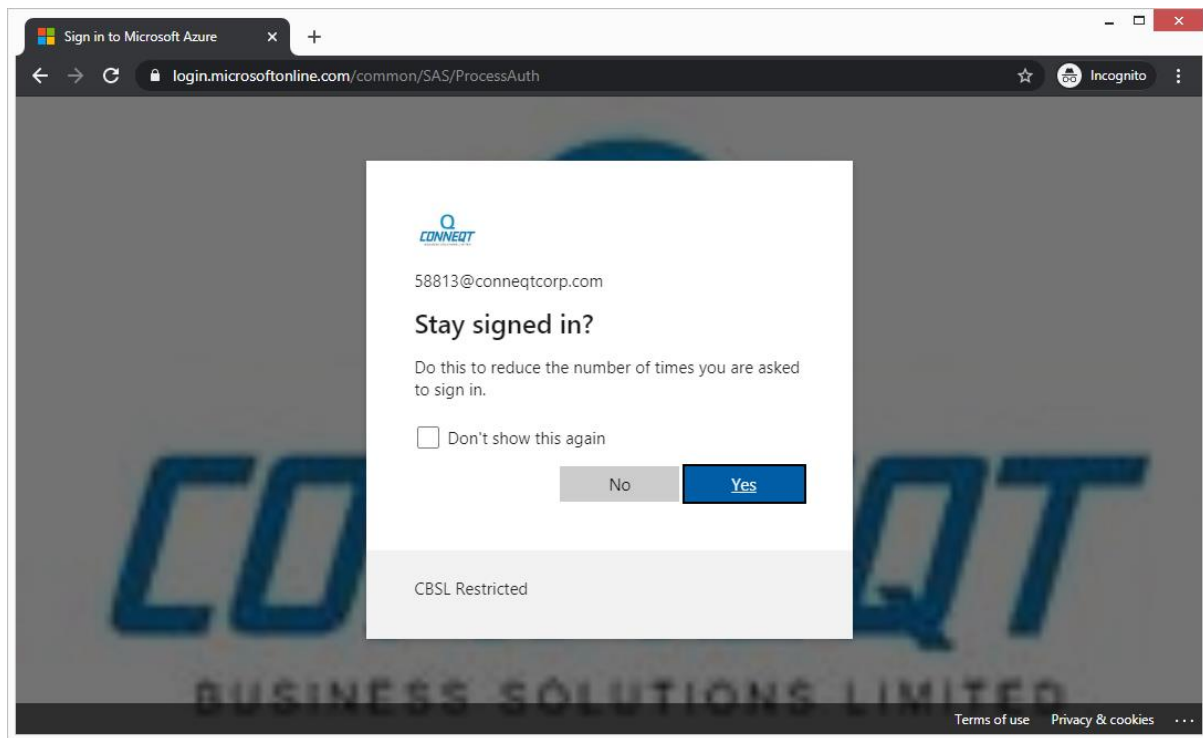

Your Authenticator app will get activated for Work account. Click on “GOT IT” Button

Everytime a new login is made on any device, you need not enter OTP or verify with a call. You will receive mobile notification

Approve – If the login is initiated by you

Reject – If the login is not initiated by you.
